

## List of Figures

Figure 2.1: DRE voting system.	15
Figure 2.2: Diebold AccuVote-TS system (Left) and Hart InterCivic eSlate system (Right).	16
Figure 2.3: EVM System around the world.	23
Figure 2.4: EVM system used for 2018 Bangladesh National Election.	24
Figure 3.1: Biometric identity template for different voters.	26
Figure 3.2: Block diagram for vote casting, counting & verifiability.	28
Figure 3.3: Block diagram for voter access.	29
Figure 3.4: Fingerprint Sensor.	30
Figure 3.5: Arduino IDE Serial Monitor for enrolling fingerprint.	31
Figure 3.6: Waiting for valid fingerprint as ID #1.	32
Figure 3.7: Fingerprint enrollment as ID #1 is stored.	32
Figure 3.8: Fingerprint detect test for ID#1.	33
Figure 3.9: Arduino Uno Board.	33
Figure 3.10: Arduino Mega Board.	34
Figure 3.11: SIM800L GSM Module.	35
Figure 3.12: RC522 RFID Module Pinout.	37
Figure 3.13: DS3231 RTC Module Pinout.	38
Figure 3.14: Micro SD Card Module Pinout.	39
Figure 3.15: Circuit Diagram for Voter Access.	40
Figure 3.16: Circuit Diagram of our EVM.	41
Figure 3.17: Demo version of our voting machine.	41
Figure 4.1: Display shows the instruction to put the ID card to the reader.	43
Figure 4.2: Display shows the ID of a valid voter.	43
Figure 4.3: Display shows the name of the voter with DOB.	44
Figure 4.4: Display shows an invalid ID.	44
Figure 4.5: Display shows access is denied for an invalid voter.	44
Figure 4.6: Instruction to press Match Key button.	45
Figure 4.7: Instruction to place finger again.	45
Figure 4.8: Asking an authorized voter to vote.	45
Figure 4.9: Display shows “vote is submitted for candidate 1”.	46
Figure 4.10: Display shows “A voter is already submitted his/her vote”.	46
Figure 4.11: Display shows how many votes the candidates have received.	47
Figure 4.12: Display shows “candidate 1 is the winner”.	47
Figure 4.13: Display shows how many votes the candidates have received.	47
Figure 4.14: Tie between Candidate 1 & Candidate 2.	47
